Protection against cervical cancer —

Medical research is the beginning of hope. And today, its promise has never been greater with considerable progress in new treatments and therapies for heart disease, cancer, asthma, depression, and other incurable diseases. Now a more than 5 percent cut to the NIH budget—scheduled for early March—threatens that hope. Unless Congress acts, these devastating cuts will delay medical progress that could help millions of patients and their families for years to come.

**Congress: America needs to invest more in medical research, not less.
Don't cut NIH funding—it's one of the best investments we can make in our future.**

**RESEARCH
MEANS HOPE**

MORE FUNDING TODAY.
MORE MIRACLES TOMORROW.
